

Spirit Mobile Delivery™

A modular solution for delivery and courier companies

Overview

Any business that involves the delivery and distribution of items needs to make sure that its operations are as streamlined and effective as possible. Customers increasingly expect a fast and reliable service, and they want instant access to the latest information about the current status of their delivery.

The Spirit Mobile Delivery™ system comprises a diverse range of integrated modules, enabling you to choose the specific ones you need to build a complete solution that meets both your needs and those of your customers. It enables drivers to keep in touch via real-time wireless communications.

Our modules include such essential elements as proof of delivery; choice of communication options; satellite navigation; vehicle tracking; messaging; traffic alerts; warehouse and vehicle management; and trunking (container movement). These will all help to ensure that your deliveries are as fast, efficient and reliable as possible.

Key hardware/software

Spirit Mobile Delivery™ is available as a complete kit, which includes the host PC software application, the mobile application and the mobile device. The mobile device can be chosen from one or more of a range of associated hardware options. These include:

- A rugged tablet PC
- A compact Personal Digital Assistant (PDA)
- A powerful handheld mobile computer

Key benefits

This comprehensive modular solution can be tailored to meet your precise needs. It provides a host of exciting benefits, including:

Streamlined distribution – through rapid access to real-time information that will speed up deliveries

Better planning – through the ability to choose the most effective routes; satellite navigation; traffic alerts; and greater fleet visibility

Significant cost savings – through more efficient planning and improved communications with drivers

Enhanced cash flow – you can invoice as soon as the delivery is notified, and your accounts are updated in real time

Greater productivity – as new pick-ups and changes in delivery instructions can be notified rapidly to the driver via cost-effective messaging facilities

Less paperwork – as even signatures can be captured electronically

More accurate information – due to automated data and image capture, including the ability to photograph damaged goods etc.

Key features

Straightforward set-up

Our solution is easy to install and use: it will effectively work straight from the box. It is flexible and pre-configurable and offers both batch and wireless (real-time) communication options. We can host the system and application for you, enabling you to focus on your core business activities.

Mobile versatility

The mobile device chosen can be used for a wide variety of tasks – from inputting delivery or collection data, tracking containers, and wireless communications with the depot or head office, right through to downloading the delivery manifest and signature capture at the point of delivery.

Detailed information

You can collect and analyse data instantly from a wide variety of activities throughout every stage of the delivery cycle – ranging from warehouse management details through to despatch, pickup and delivery, vehicle location and movements, and depot operations.

PC and mobile device – minimum specification
