

Spirit On The Move™

A great way of keeping in touch with your mobile workers

Overview

To maximise the effectiveness of your mobile workforce, you need up to date information on what they are doing, and they need rapid access to the latest task-related data. Spirit On The Move™ will keep you in touch with your workers in the field, and will keep them in touch with the latest project developments, customer information and product details.

In addition to aspects such as task management, status and verification, our comprehensive solution provides complete back-end traceability, quality assurance, time management functions and full reporting capabilities.

Spirit On The Move™ is designed to enhance the efficiency and effectiveness of your mobile workers by giving them access to the latest information, where they need it and when they need it. This will ultimately lead to greater productivity, more streamlined processes and higher customer service levels.

Key hardware/software

Spirit On The Move™ is available as a complete kit, which includes the host PC software application, the mobile application and the mobile device. The mobile device can be chosen from one or more of a range of associated hardware options. These include:

- A rugged tablet PC
- A compact Personal Digital Assistant (PDA)
- A powerful handheld mobile computer
- A versatile mobile printer

Key benefits

Our powerful solution offers a wealth of functions which in turn provide a wide range of benefits, including:

Time and cost savings – through better time management and higher productivity, and through cost-effective communications between field workers and the office

Greater efficiency – your mobile workers can access the data they need to manage their work effectively; they can be notified immediately of any changes or new tasks

Enhanced customer satisfaction – due to a more effective service and stronger, up-to-date information

Increased productivity – mobile workers can schedule their tasks more efficiently and can get new instructions whilst in the field: they don't need to return to the office

Less paperwork – most tasks are administered and managed electronically (no more paper-based job sheets!)

Improved accuracy – as data can be inputted directly, there is less chance of errors when compared with manual systems

Better product information – mobile workers have instant access to the latest product details, including availability of items, prices, and alternative solutions

Better use of data – data can be transmitted from the field to the corporate systems to generate further work orders, status reports, invoices etc.

Key features

Straightforward set-up

Our solution is easy to install and use: it will effectively work straight from the box. It is flexible and pre-configurable and offers both batch and real-time wireless communication options. Information can be upgraded on the move, using direct synchronisation.

Versatile management information

With the real-time communications available with Spirit On The Move™, both new work and task revisions can be managed easily and efficiently. Our solution enables both you and your customers to be kept informed of the status and progress of a project. You can even use the system to monitor temporary workers.

Better flow of cash and information

Because the completion of a task can be notified electronically, invoices can be generated immediately, improving your cash flow. Our solution is designed to reduce your administrative overheads, and our streamlined electronic processes and mobile communications also help to eliminate shipping delays.

PC and mobile device – minimum specification

Client PC

Processor	800 MHz Minimum 1 GHz recommended
RAM	256 MB Minimum 512 MB or greater recommended
Minimum Hard Disk	300 MB
Operating System	Windows® Vista Windows® XP Windows® 2000 Ability to run .net 2.0

Mobile Device

Processor	ARM (v4 etc) Intel (Bulverde etc) and most other standard chipsets
Ram	32/64/128mb
Storage	32/64/128mb
Operating System	Pocket PC 2003 Windows Mobile 5.0 Windows CE 4.2.Net and 5.0 Ability to run .net compact framework 2.0
