Spirit launches Gotive H41 voice and data communication mobile computer in the UK

Spirit, the Cheshire-based independent mobile communication and data collection house, has launched the Gotive H41 rugged handheld computer, in the UK. The concept of Gotive technology is set to revolutionise the way in which companies collect and communicate information.

The Gotive solution incorporates voice and data communication in a single, handheld device. The user is provided with a large half VGA colour touch screen. Standard options include GSM/GPRS, GPS, WLAN and Bluetooth connectivity. The units also include a barcode scanner, imager, fingerprint, RFID and smartcard reader.

Ebbie Khadem, Spirit's Managing Director commented: "There has been enormous interest in the Gotive products by users and resellers. They are asking why no-one else thought of combining this level of functionality in one unit. We envisage rapid take up of gotive, over the coming months."

Editor's notes

Spirit Data Capture is based in Preston Brook, Cheshire. The company is a totally independent mobile computing and data capture house, with in-depth knowledge of the latest wireless and mobile computing technologies which boost productivity and profitability. Its services include planning, design and development, implementation, and support.
